

Corporate & Social Responsibility Policy

Farnrise Construction Limited is engaged in the construction, refurbishment, maintenance, design & build of commercial, residential, health, education, ecclesiastical and public properties.

As a company, we believe we are a part of, and should contribute to a successful & sustainable local economy. In pursuit of this, we wish to work with local businesses and organisations, recruit locally where possible and support the local community and events they organise.

As a company, we understand that each member of the company is an individual, and to obtain the best from our people, we have a management appraisal system, backed by senior staff throughout the company. We have a training programme, both in-house and externally, where all members have the opportunity to improve their knowledge and skills. Our Development and Training programme is regularly updated to ensure our training plan fulfils the requirement.

As a respected contractor, we take the environment seriously, and as such are regularly assessed by the NHBC, CHAS and Constructionline. We have produced an Environmental Policy, that is in line with ISO 14001:2004, with a view to seek accreditation with BSI.

As part of this policy, we have establishment benchmarks in waste management, the sourcing of materials both by sustainable means and locally, and to seek to recycle and use recycled products wherever possible. Where we can specify recycled products, we will discuss this with the client and their team if this is an alternative to a first use product.

We look to use sub-contractors who consider their CSR, and we review and improve our supply chain to reflect this.
